

# Adding custom DNS entries

We assume the machine has the IP `192.168.0.2`.

Create the file `config/dns.yml` and add the following

```
customDNS:
  mapping:
    example.com: 192.168.0.2
    blocky.example.com: 192.168.0.2
    other.example.com: 192.168.0.2
```

This will route the given sites internally via blocky.

Now simply set the IP as your DNS-Server in your Routers DHCP config
